SUBMITTED BY	Anushka Kadam
TITLE / ROLE	Member

THE PROJECT

In bullet points, describe the problem this project aims to solve or the opportunity it aims to develop.

The IncredIGreen application is an online nursery that allows you to shop for plants from the comfort and convenience of your homes. Using this application, customers can view all the available plants with details such as the plant's cost, level of maintenance required, watering.

THE HISTORY

In bullet points, describe the current situation.

Be it a cozy studio apartment, a sprawling mansion, or an office filled with rows of cubicles- plants tend to brighten and liven up any room.

However, while some plants can survive even with minimal care, others demand much more attention. Whether you are a seasoned plant parent or a beginner tending to your first potted plant, visiting multiple nurseries to find the right plant to suit your needs can get tedious and end up eating up your entire weekend.

LIMITATIONS

List what could prevent the success of the project, such as the need for expensive equipment, bad weather, lack of special training, etc.

- Wrong inputs will affect the project outputs.
- Internet Connection is mandatory.
- Can consume time if system crashes down.

APPROACH

List what is needed to complete the project.

The waterfall model is a classical model used in system development life cycle to create a system with a linear and sequential approach.

The system comprises of 2 major modules with their sub-modules as follows:

1. Admin Module

- 1) Login-Admin can login into the system using username and password.

- 2) Manage Plants - Admin can add, delete and update plant details (Name, season type, Image, etc)

- 3) View Plants – Admin can view plants.

- 4) View order details– Admin can view order details.

- 5) View Reviews – Admin can view reviews.

- 6) View Customers – Admin can view customers.

- 7) Logout – Admin can logout from the system.

2. Customer Module

- 1) Login –Customer can login into system using username and password.

- 2) Registration – Customer can register itself to login.

- 3) View Plants – Customer can view plants and plant details.

- 4) View Wishlist – Customer can view its favourite plants.

- 5) Reviews – Customer can give reviews.

- 6) My Cart – Customer can view its cart.

- 7) Logout – Customer can Logout from the system.

BENEFITS

In bullet points, list the benefits that this project will bring to the organization.

- Customers can get their plants delivered instead of physically visiting nurseries.
- Enables nurseries to automate selling plants online.
- Allows Nurseries to accept online payments.
- User can add plants they like to their wish list.

APPROACH

The waterfall model is a classical model used in system development life cycle to create a system with a linear and sequential approach. It is termed as waterfall because the model develops systematically from one phase to another in downward fashion. The waterfall approach does not define the process to go back to the previous phase to handle changes in requirements. The waterfall approach is the earliest approach that was used for software development. The system comprises of 2 major modules with their sub-modules as follows:

Admin Module

- 1) Login-Admin can login into the system using username and password.
- 2) Mange Plants - Admin can add, delete and update plant details (Name, season type, Image, etc.)
- 3) View Plants – Admin can view plants.
- 4) View order details– Admin can view order details.
- 5) View Reviews – Admin can view reviews.
- 6) View Customers – Admin can view customers.
- 7) Logout – Admin can logout from the system.

Customer Module

- 1) Login –Customer can login into system using username and password.
- 2) Registration – Customer can register itself to login.
- 3) View Plants – Customer can view plants and plant details.
- 4) View Wishlist – Customer can view its favorite plants.
- 5) Reviews – Customer can give reviews.
- 6) My Cart – Customer can view its cart.
- 7) Logout – Customer can Logout from the system.

STAKEHOLDER DESCRIPTION

Stakeholder Name	Activity/ Area /Phase	Interest	Influence	Priority				
Vendors	Individuals or groups who trade plants.	High	High	1				
Team Lead	Leads the team in every aspect and is responsible for the entire project scope.	High	High	2				
Team Members	Retain and upgrade skills, demand incentives, new launch excitement.	High	High	2				
Monitors	Those who produce and hold knowledge required	High	Medium	2				
Stakeholders with high interest and influence include Vendors, Team Lead, Team Members, and Monitors. These stakeholders are critical to the project's success.					<p>to detect, identify, or understand plants. Such knowledge may be scientific, practitioner or local.</p> <p>Networkers</p> <p>Disseminate knowledge amongst stakeholders in plants. They can overlap or be part of another group e.g. government agencies.</p> <p>Plant Enthusiasts</p> <p>Those with a wider interest in plants and management.</p> <p>Resource Manager</p> <p>Resource planning and allocation, and ensuring adequate resources according to project needs and budget.</p> <p>End users</p> <p>Provide Feedback.</p>	Medium	Medium	3
Stakeholders with medium interest and influence include Networkers, Plant Enthusiasts, Resource Manager, and End users.					<p>Networkers</p> <p>Disseminate knowledge amongst stakeholders in plants. They can overlap or be part of another group e.g. government agencies.</p> <p>Plant Enthusiasts</p> <p>Those with a wider interest in plants and management.</p> <p>Resource Manager</p> <p>Resource planning and allocation, and ensuring adequate resources according to project needs and budget.</p> <p>End users</p> <p>Provide Feedback.</p>	Medium	Low	4
Stakeholders with low interest and influence include End users.					<p>End users</p> <p>Provide Feedback.</p>	Low	Low	5
Stakeholders with very low interest and influence include End users.					<p>End users</p> <p>Provide Feedback.</p>	Low	Low	6

REQUIREMENTS

SYSTEM	FUNCTIONAL	NON-FUNCTIONAL
<ul style="list-style-type: none">• PROCESSOR- Intel Pentium 4 or later• MEMORY- 2GB minimum• SCREEN RESOLUTION-1280X1024	<ul style="list-style-type: none">• Customer- a person who can use the site• Admin Dashboard- a web portal allowing admin to view and manage customer's order details.• User Interface (UI)- medium of interaction between user and the site.• Cart and Wishlist- list of plants that have been selected and added to the cart.• Customer's Review- customer can give and read reviews.	<ul style="list-style-type: none">• Security- site will be secured to protect sensitive data.• Portability- this site will be able to run in all search engines.• Maintainability- We will provide regular updates for our site to fix bugs and to fulfill user's requirements.• Scalability- to increase reach of our site different type of sponsorship and advertisers will be required to promote our site.• Usability- the website will be easy to use even for a non-technical user.

RISK ANALYSIS

S	Strengths
Consistent quality: We consistently produce plants with high active botanical ingredients.	
Saleable plants: We produce a high ratio of healthy (saleable) plants.	
Experience: Co-owners have a strong combination of business development and horticultural experience.	
W	Weaknesses
Lack of funding: We will need to borrow \$100,000 in funds for the first year.	
No reputation yet: We haven't established ourselves as reputable growers in the botanical market yet.	
O	Opportunities
Customer loyalty: Customers are looking for an ongoing relationship with one botanicals vendor.	
Growing market: The market for supplements is huge and growing.	
T	Threats
Weather: A poor growing season due to the changes in weather can seriously affect production.	
Pests: Pests are a threat to our ability to provide healthy plants.	
Similar-sized farms: Some similar-sized farms have been in business longer.	

Response	Strategy	Example
Avoid	The team takes necessary actions to remove the risk.	Extending the scheduled delivery time.
Transfer	The team transfers the risk to a third party.	Performance bonds
Mitigate	The team will work on certain aspects to reduce the probability of risk becoming real.	Requirement of expandable storage capacity
Accept	The team accepts the risk and doesn't take any action because its impact on project is extremely low.	Slow user interface and poor graphics.
